Terms

This list cancels all previous offers.

All sales are made subject to the terms and conditions of our printed catalog.

Disclaimer: We give for ourselves or our Principals no warranty, express or implied, as to the description, quality or productiveness, or in any other respect for the seed we deliver, nor will we be responsible for the crop in any way. In no case shall we or our Principals be held liable for more than the invoice value of the seed sold.

Payment: Our prices are calculated on a strictly cash basis; customers remitting with their orders will be allowed 5% discount. When remitting please add for postage and packing.

Less than 8 ozs. furnished at an advance in price of 25%; minimum order, unless specifically provided, 6 ozs. Minimum charge for any one item 25c.

Seed of Oriental origin is offered for account of Messrs. T. Sakata & Co., Japan's Leading Seedsmen. As their representatives in the United States and Canada you will always find us prepared to quote and assist you in locating seed originating in the Far East.

Japanese Flowering Cherries

Have arrived from Japan

The late Dr. E. H. Wilson continually urged the use of Japanese understock for the Oriental Flowering Cherries, in spite of the difficulty of their production from seed. Too often failure in germination is attributed to the quality of the seed rather than to faulty handling. Check tests through botanical institutions convince that our method of packing the seed for the long trip from Japan brings it to our customers in prime condition. Our new crop seed is now in New York. If we have your order it is immediately dispatched to you the day your order is received. The seed should AT ONCE be put in flats with moist sand. The sand must never be allowed to dry. The flats may be kept in the open where they are subject to natural stratification. In warmer climates artificial stratification is necessary as cherries require at least 12 weeks to afterripen. Sowing in the open is advisable as soon as the weather permits. One successful grower sowed his seed in a two inch deep furrow, filling it over with grain husks. This reduced the weed problem and helped supply the seed its continual demand for moisture.
